Report analysis

scrutiny by ethical committees.

These committees are the watchdogs that judge whether or not a project is ethical. Normally, ethical reviews by

such committees take place when a project involves experiments or investigations using people as part of the subject material. In addition, reviews might be needed for projects which involve the use of animals or in fields

where there are political or environmental concerns. In such cases, project proposals are submitted to an ethical

committee for approval. If the project proposal is determined as unethical then the research cannot be undertaken. However, the role of the ethical committee is not simply to stop research but also to point out to researchers ethical problems that they might have overlooked when formulating the project, and to act as a source of information and advice.

Ethical committees normally consist of researchers, other academics, often a clergyman and lay people. They sometimes also recruit additional guest members for specific advice about certain project proposals. The control

and decisions made by such committees are influenced by numerous laws and conventions often enforced by bodies such as the United Nations, civil rights groups and specific country laws, e.g. in the UK European directives. Also the role of current public opinion can have an influencing role in the decision making process of

ethics committees.

It is important to also realisTo ensure that these requirements are met research projects can be subject to

scrutiny by ethical committees.
