

FIRST REPORT THE YEAR 2019/2020

Prepared by: David odinga

Date : 2019-06-26

Subtitle 1 : General report depicting the system

Type: General report

Measure	Value
Type	general
Earliest farrowed date	1989-06-26
Latest farrowed date	2019-06-26
Minimum weight	0 Kgs
Maximum weight	0 Kgs
Breeds	all
Sex	all

BREED	COUNT
Total	0

Report analysis

These committees are the watchdogs that judge whether or not a project is ethical. Normally, ethical reviews by such committees take place when a project involves experiments or investigations using people as part of the subject material. In addition, reviews might be needed for projects which involve the use of animals or in fields where there are political or environmental concerns. In such cases, project proposals are submitted to an ethical committee for approval. If the project proposal is determined as unethical then the research cannot be undertaken. However, the role of the ethical committee is not simply to stop research but also to point out to researchers ethical problems that they might have overlooked when formulating the project, and to act as a source of information and advice. Ethical committees normally consist of researchers, other academics, often a clergyman and lay people. They sometimes also recruit additional guest members for specific advice about certain project proposals. The control and decisions made by such committees are influenced by numerous laws and conventions often enforced by bodies such as the United Nations, civil rights groups and specific country laws, e.g. in the UK European directives. Also the role of current public opinion can have an influencing role in the decision making process of ethics committees. It is important to also realise To ensure that these requirements are met research projects can be subject to scrutiny by ethical committees.
